

Alco Preventions Driving Fatigue Simulation Glasses for Realistic Simulation of Sleepless 12-Hour Drive – Blue-Tinted Vision Impairment Goggles for Educational and Training Purposes (Black)

DRIVING FATIGUE SIMULATION GLASSES: Experience the effects of riding all night for 12 hours with a pair of these **alcohol impairment glasses** to raise awareness of the risks of fatigue at dawn after sleepless night at the wheel.

FOR EDUCATIONAL & TRAINING PURPOSES: The use of **drunk simulation goggles** helps drivers, educators and safety workers understand how the effects of driving fatigue translate into slightly impaired skills when it comes to alertness and focus.

FEATURES: Made from impact-resistant material for comfort, durability, and easy maintenance. This is not a toy, don't use it as goggles or for sports, and always use it under the supervision of an educator in a secure environment.

REALISTIC EFFECTS: Our **vision training glasses** have blue-tinted lenses to help simulate driving at dawn. It helps you recognize the early warning signs of fatigue such as drowsy feeling, heavy head, poor visibility and difficulty staying in line.

DRIVE SAFELY: The fatigue simulation glasses allow you to gauge how much longer you should drive safely before taking a break, and hopefully get some rest before you ever hit the road again. It adapts to all body types and can be used with prescription glasses.

DESCRIPTION:

When fatigue is severe and/or persists for an extended period of time, a driver can become so disoriented that they are unable to safely drive their vehicle. That's why these fatigue simulation glasses are helpful in demonstrating this point by creating situations where a person might not be able to stay awake while driving. This way they can experience what it's like and hopefully get some rest before they ever hit the road again.

Our simulation glasses aren't simply a matter of entertaining curiosity, they can be used as tools to aid you in staying on track while driving. It simulates the effects of not having enough rest or sleep when driving, so you experience blurred vision, slightly impaired perception of distances, and dizziness and understand that driving while fatigued can be as dangerous as driving while drunk.

Our **drunk driving goggle**s can be used by teachers, driving instructors, military and police offices, or work safety trainers as a fun way to demonstrate how driving fatigue affects people's performance in driving situations, especially during the night or dawn. They're realistic enough that you'll feel like you're actually drinking alcohol, but safe enough to use in classrooms or at home.

What's great about these glasses is that you don't have to be a professional to experience the effects of driving fatigue. In fact, you could even use them as a real eye-opener to demonstrate why it's okay to not drive when you're sleepy. These **drunk goggles glasses** might help you be a safer driver and encourage your friends to always drive responsibly.
